

Create a simple cloud software application for Car Booking Reservation System using any Cloud Service Provider to demonstrate SaaS.

AIM: To create a simple cloud-based car booking reservation application using Zoho Creator and to demonstrate the Software as a Service model.

REQUIREMENTS: Internet connection, web browser, Zoho Creator account

PROCEDURE:

1. Open the Zoho Creator website and sign in using your Zoho account.
2. Click **Create New Application** and select **Create from Scratch**.
3. Enter the application name as **Car Booking Reservation System** and click **Create**.
4. Create a form named **Car Booking Form**.
5. Add fields such as customer name, mobile number, email address, pickup location, drop location, car type, journey date, pickup time, number of passengers, distance, rate per kilometre, total fare, booking status and payment status.
6. For the car type field, add options such as Hatchback, Sedan, SUV and Luxury Car.
7. For the booking status field, add options such as Pending, Confirmed, Completed and Cancelled.
8. For the payment status field, add options such as Pending and Paid.
9. Open the **Workflow** section and create a form workflow for the Car Booking Form.
10. Select the workflow trigger as **On User Input** and choose the Distance field.
11. Enter the Deluge code to calculate the total fare automatically based on the selected car type, distance and rate per kilometre.

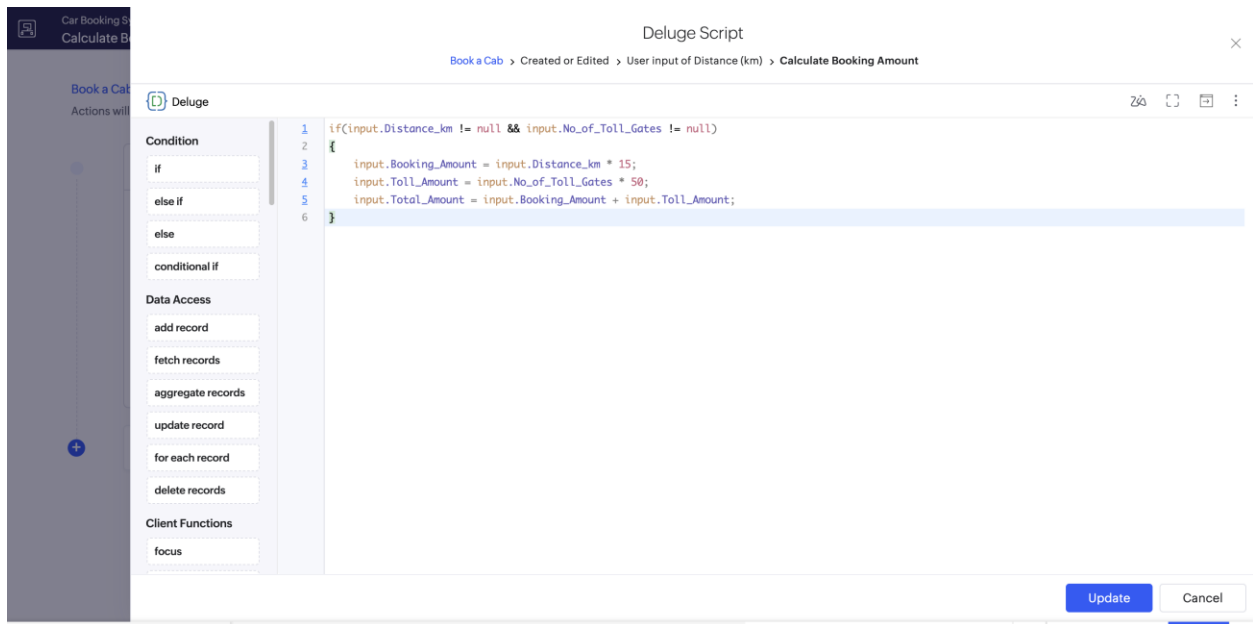

12. Save the workflow and run the application.
13. Enter sample customer details and booking information in the form.
14. Select the required car type and enter the journey distance.
15. Verify that the rate per kilometre and total fare are calculated automatically.
16. Submit the form and check whether the booking record is stored successfully in the Zoho Creator cloud database.

IMPLEMENTATION:

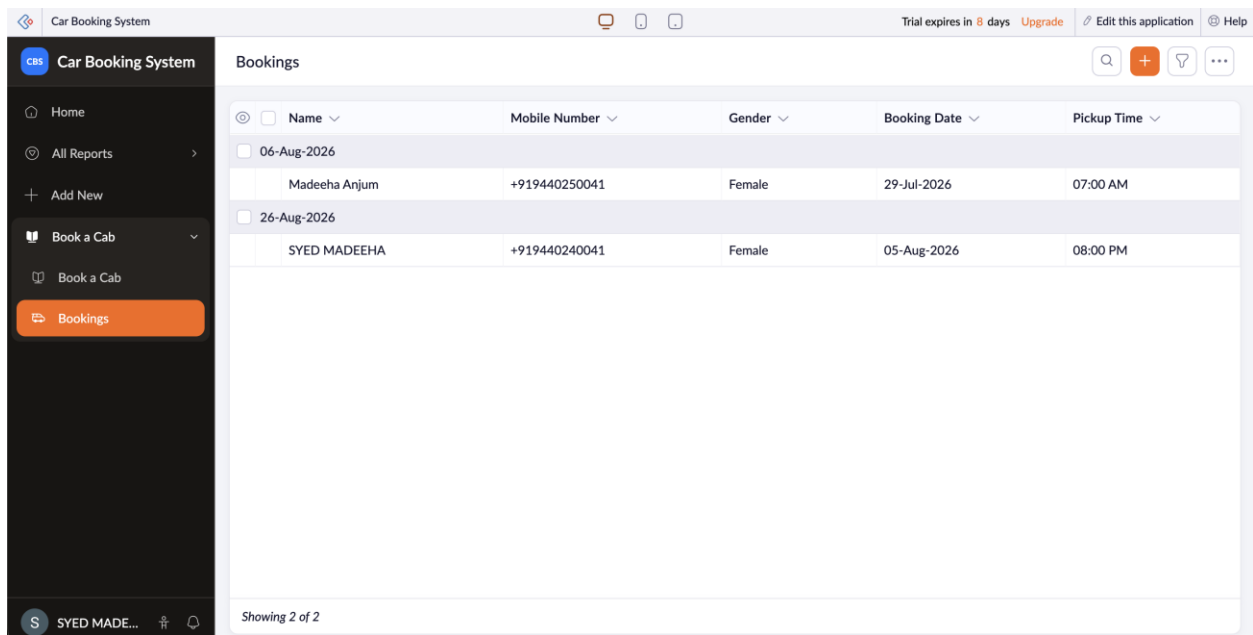

The screenshot displays the Zoho Creator interface for editing a form titled "Book a Cab" within a "Car Booking System" app. The interface is divided into three main sections:

- Basic Fields:** A sidebar on the left containing icons for various field types: Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, and Drop Down.
- Form Fields:** The central area shows the form layout with the following fields:
 - Name (Text field)
 - Mobile Number (Text field)
 - Gender (Radio button)
 - Booking Date (Calendar icon)
 - Number Of Passengers (Number field)
 - Travel Date (Calendar icon)
 - Pickup Time (Time field, highlighted with a blue dashed border)
 - Pickup Address (Text field, highlighted with a blue dashed border)
 - Destination Address (Text field)
 - Distance (km) (Number field)
- Field Properties:** A sidebar on the right for configuring the selected "Pickup Time" field.
 - Field name:** Pickup Time
 - Field link name:** Pickup_Time
 - Choices:** A list of time slots: 06:00 AM, 07:00 AM, 07:00 PM, and 08:00 PM. Each choice has plus, minus, and edit icons.
 - Alphabetical Order:** A checkbox option.

The bottom of the interface includes a status bar with "Trial expires in 8 days", an "Upgrade" button, and a "Help" button.

OUTPUT:

DELUGE CODE:

```

if(input.Distance_km != null && input.No_of_Toll_Gates != null)
{
input.Booking_Amount = input.Distance_km * 15;
input.Toll_Amount = input.No_of_Toll_Gates * 50;
input.Total_Amount = input.Booking_Amount + input.Toll_Amount;
}

```

RESULT:

The Cloud-Based Car Booking Reservation System was successfully created using Zoho Creator. The application allows users to enter customer details, select the car type, specify pickup and drop locations, journey date, distance and other booking information.

Based on the selected car type and entered distance, the application automatically calculates the rate per kilometer and total fare. The submitted booking details are stored successfully in the Zoho Creator cloud database.

Thus, the experiment demonstrates the Software as a Service model by providing a car booking reservation application that can be accessed through a web browser using an internet connection.
