

Create a simple cloud software application for Flight Reservation System using any Cloud Service Provider to demonstrate SaaS

AIM: To create and deploy a simple Flight Reservation System using Zoho Creator, a cloud-based application development platform, to demonstrate the Software as a Service (SaaS) cloud service model.

REQUIREMENTS: Internet connection, web browser, Zoho Creator account

PROCEDURE:

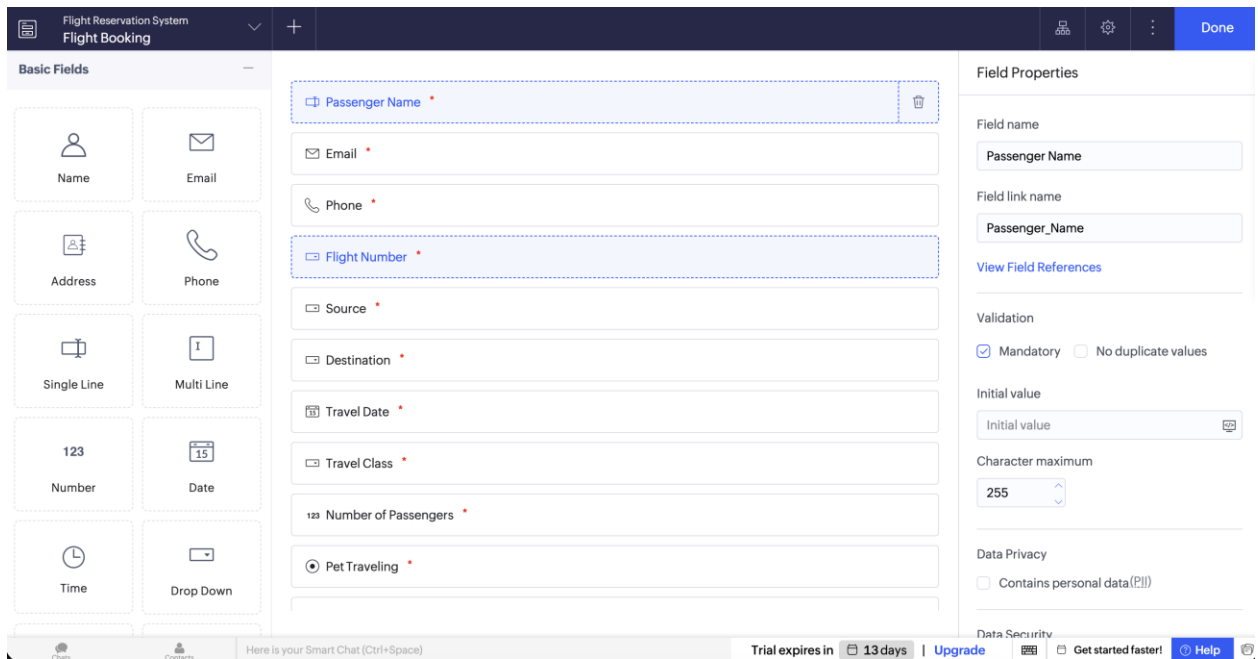

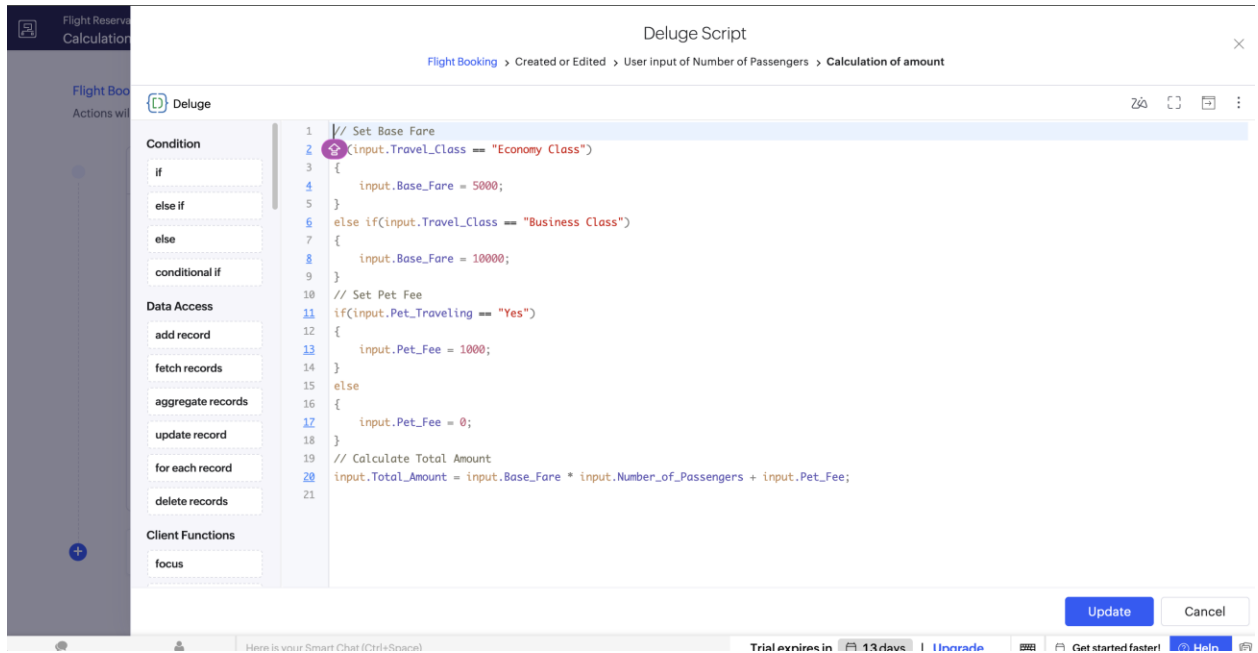

1. Open Zoho Creator and sign in using a Zoho account.
2. Create a new application named Flight Reservation System.
3. Create a Flight Booking form and add fields such as:
 - a. Passenger Name
 - b. Email
 - c. Phone
 - d. Flight Number
 - e. Source
 - f. Destination
 - g. Travel Date
 - h. Travel Class
 - i. Number of Passengers
 - j. Pet Traveling
 - k. Pet Type
 - l. Special Assistance
 - m. Base Fare
 - n. Pet Fee
 - o. Total Amount
 - p. Payment Method
 - q. Payment Status
4. Set Travel Class as a dropdown with:
 - a. Economy Class
 - b. Business Class
5. Set Pet Traveling as a Yes/No choice field.

6. Set Payment Method as a dropdown with:
 - a. Cash
 - b. UPI
 - c. Credit Card
 - d. Debit Card
7. Set Base Fare, Pet Fee, and Total Amount as Currency fields. Keep these fields non-mandatory, as their values will be calculated automatically.
8. Create a workflow for the Flight Booking form to calculate the fare automatically.
9. Configure the workflow to execute before form submission / during form validation.
10. Use the following logic in the workflow:
 - Economy Class → Base Fare = ₹5,000
 - Business Class → Base Fare = ₹10,000
 - If Pet Traveling = Yes → Pet Fee = ₹1,000
 - If Pet Traveling = No → Pet Fee = ₹0
11. Calculate the total amount using:

$$\text{Total Amount} = (\text{Base Fare} \times \text{Number of Passengers}) + \text{Pet Fee}$$

12. Save and enable the workflow.
13. Enter sample flight booking details and submit the form.
14. Verify that the system automatically calculates and stores the Base Fare, Pet Fee, and Total Amount.
15. Create a Reservation Report to display the submitted booking details, including passenger information, flight details, travel class, total amount, payment method, and payment status.
16. Test the application with different combinations such as Economy/Business Class, 1 or more passengers, and Pet Yes/No.
17. Demonstrate the application as a SaaS application by showing that the Flight Reservation System is hosted on the Zoho cloud platform and can be accessed through the internet without installing or maintaining the application locally.

Help

DELUGE CODE:

```
// Set Base Fare
if(input.Travel_Class == "Economy Class")
{
input.Base_Fare = 5000;
}
else if(input.Travel_Class == "Business Class")
{
input.Base_Fare = 10000;
}
// Set Pet Fee
if(input.Pet_Traveling == "Yes")
{
input.Pet_Fee = 1000;
}
else
{
input.Pet_Fee = 0;
}
// Calculate Total Amount
input.Total_Amount = input.Base_Fare * input.Number_of_Passengers + input.Pet_Fee;
```

RESULT:

A simple cloud-based Flight Reservation System was successfully created using Zoho Creator. The application allows users to enter passenger and flight details, select travel class, specify the number of passengers, indicate pet travel, calculate the base fare, pet fee, and total booking amount, and select a payment method. The reservation details are stored and managed on the cloud, successfully demonstrating the Software as a Service (SaaS) model.
