

Create a simple cloud software application for Property Buying & Rental process (In Chennai city) using any Cloud Service Provider to demonstrate SaaS

AIM: To create a simple cloud-based software application using Zoho Creator for managing property buying and rental enquiries in Chennai and to demonstrate the Software as a Service model.

REQUIREMENTS: Internet connection, web browser, Zoho Creator account

PROCEDURE:

1. Open the **Zoho Creator** website and sign in using your Zoho account.
2. Click **Create New Application** and select **Create from Scratch**.
3. Enter the application name as **Chennai Property Portal** and click **Create**.
4. Create a form named **Property Enquiry**.
5. Add fields such as customer name, mobile number, property type, transaction type, Chennai location, property price, advance percentage, advance amount, remaining amount, enquiry date and status.
6. For the property type field, add options such as Apartment, Villa, Independent House and Commercial Property.
7. For the transaction type field, add the options **Buy** and **Rent**.
8. Add Chennai locations such as Anna Nagar, Adyar, Velachery, T. Nagar, Porur, and Tambaram.
9. Open the **Workflow** section and create a form of workflow for the Property Enquiry form.
10. Select the workflow trigger as **On User Input** and choose the **Advance Percentage** field.
11. Enter the Deluge code to calculate the advance amount and remaining amount automatically.
12. Save the workflow and run the application.
13. Enter sample customer and property details in the form.
14. Enter the property price and advance percentage and verify that the advance amount and remaining amount are calculated automatically.
15. Submit the form and check whether the entered record is stored successfully in the Zoho Creator cloud database.

}
}
}
```

RESULT:

The **Cloud-Based Property Buying and Rental Application** was successfully created using Zoho Creator. The application allows users to enter customer details, select the transaction type, property type, preferred Chennai location, and property area.

Based on the entered details, the application automatically calculates the **rate per square foot, property price, monthly rent, security deposit, advance amount, and remaining amount**. The submitted enquiry details are stored successfully in the Zoho Creator cloud database.

Thus, the project demonstrates the **Software as a Service (SaaS)** model by providing a property enquiry management application that can be accessed through a web browser using an internet connection.
